

# The BYU QuikSCAT/SeaWinds Ultra High Resolution Wind and Wind/Rain Product

Brent Williams  
Brigham Young University  
459 Clyde Building, Provo, UT 84602

## 1 BYU Ultra High Resolution Wind/Rain Product User Notes

### 1.1 Data Format:

Table 1 shows the header of the BYU L2H product HDF file.

Table 2 summarizes the SDS contents of the file. The individual SDS elements are described below.

The various data sets contain:

1. **ascnode**: indicates whether the data is from an ascending or descending pass
2. **swath\_indices**: vector of along-track and cross-track starting and ending indicies on ultra high resolution grid. The data is stored as follows [along-track\_start, along-track\_end, cross-track\_start, cross-track\_end].
3. **latitude**: latitude index of each wvc
4. **longitude**: longitude index of each wvc
5. **land\_mask**: flags land or water for each wvc
6. **wind\_speed**: wind-only wind speed ambiguities (m/s), in corresponding MLE value order
7. **wind\_dir**: wind-only wind direction ambiguities (deg), in corresponding MLE value order
8. **num\_ambigs**: number of wind-only ambiguities at each wvc (max=4)
9. **max\_likelihood\_est**: MLE value from wind retrieval (units arbitrary)
10. **wvc\_selection**: index (1..4) of selected wind-only ambiguity (type of ambiguity selection is in the ambig\_select field in the header)
11. **wvc\_selection2**: alternate ambiguity selection (type of ambiguity selection is in the ambig\_select2 field in the header)
12. **wind\_speed\_ncep**: ncep wind speeds (m/s) interpolated to 2.5km
13. **wind\_dir\_ncep**: ncep wind directions (deg) interpolated to 2.5km
14. **wind\_speed\_L2B**: L2B wind speeds (m/s) interpolated to 2.5km

Table 1: Header Structure for BYU L2H Product. Sample values shown.

Element Name	Definition	Max Array Size
LongName	QuikSCAT 2.5km Ocean Wind Vectors and Rain Rate	[1]
ShortName	QSCATL2H	[1]
producer_institution	Brigham Young University (BYU), Microwave Earth Remote Sensing (MERS) Laboratory	[1]
InstrumentShortName	SeaWinds	[1]
PlatformLongName	NASA Quick Scatterometer	[1]
PlatformShortName	QuikSCAT	[1]
data_format_type	NCSA HDF	[1]
L2Hfilename	QS_S2H03221.20001592043	[1]
avewrfilename	QS_S2A03221.20001592043.avewr	[1]
L2Bfilename	QS_S2B03221.20001592046	[1]
Investigator	David G. Long, long@ee.byu.edu (801) 422-4383	[1]
WindModel	QS_MODL0003	[1]
RainModel	BYU V6 Quadratic	[1]
RainThresholds	BYU_rainflag_thresholds_V0.txt	[1]
build_id	1.000/2004-01-01	[1]
ambig_select	Median Filtered Closest to L2B	[1]
ambig_select1	Maximum Aposteriori Probability	[1]
rain_file	indicates whether file contains simultaneous wind/rain info	[1]
map_file	indicates whether file contains MAP estimation info	[1]

Table 2: Possible HDF SDS arrays within the BYU L2H Product. <sup>(1)</sup> Simultaneous wind/rain data not always included. <sup>(2)</sup> MAP wind estimation data for hurricanes not always included.

Dataset/Name	Rank	Dimensions (Maximum)			Scale	Offset	Type
ascnode	1	1	0	0	0.056	0.0	int*2
swath_indices	1	4	0	0	1.000	0.0	int*2

15. **wind\_dir\_L2B**: L2B wind directions (deg) interpolated to 2.5km
16. **wind\_speed\_swr**: simultaneous wind/rain wind speed ambiguities (m/s), in MLE value order
17. **wind\_dir\_swr**: simultaneous wind/rain wind direction ambiguities (deg), in MLE value order
18. **rain\_rate\_integrated**: rain rate ambiguities (km mm/hr), in MLE value order
19. **rain\_rate\_surface**: rain rate ambiguities (mm/hr), in MLE value order
20. **max\_likelihood\_est\_swr**: MLE value from wind or wind/rain retrieval (units arbitrary)
21. **num\_ambigs\_swr**: number of ambiguities at each wvc (max=4)
22. **wvc\_selection\_swr**: index (1..4) of selected simultaneous wind/rain ambiguity based on median-filter-based ambiguity removal
23. **percent\_rain**: inferred wvc rain fraction (percent) for each ambiguity
24. **regime**: estimated wind/rain retrieval regime
  - 0 - Estimated rain does not significantly affect wind (rain estimate poor)
  - 1 - Estimated rain and wind backscatter are of same order (both rain and wind estimate OK)
  - 2 - Estimated rain dominates wind (wind estimate quality poor)
25. **wvc\_selection\_opt**: ambiguity selection index (1..4) from combined simultaneous wind/rain and wind-only retrieval. Index is for simultaneous wind/rain ambiguities (wind\_speed) where **set\_selection\_opt**=0 or from wind-only ambiguities (wind\_speed1) where **set\_selection\_opt**=1
26. **set\_selection\_opt**: flag to indicate which retrieval method is used for each wvc. Used with **wvc\_selection\_opt**.
  - 0 - index value **wvc\_selection\_opt** for simultaneous wind/rain retrieval,
  - 1 - index value **wvc\_selection\_opt** for wind-only retrieval
27. **wvc\_quality\_flag**: copy of L2B wvc\_quality\_flag on 2.5km grid
28. **rain\_confidence\_flag**: rain estimate quality confidence flag
  - 0 - Low confidence in estimated rain
  - 1 - High confidence in estimated rain
29. **hurricane\_model\_params**: hurricane model parameters for MAP estimation [along-track\_eye\_index, cross-track\_eye\_index, max\_speed\_scale, mean\_flow\_u, mean\_flow\_v]. Along-track\_eye\_index and cross-track\_eye\_index are the eye center indices starting from along-track\_start and cross-track\_start.
30. **wvc\_selection\_map**: index (1..4) of selected point-wise MLE ambiguity based on MAP ambiguity selection
31. **map\_model\_speed**: hurricane model fit speed field that provides the means of the prior distributions for MAP ambiguity selection or MAP estimation
32. **map\_model\_dir**: hurricane model fit direction field that provides the means of the prior distributions for MAP ambiguity selection or MAP estimation

33. **wind\_speed\_map**: field-wise MAP estimation wind speed ambiguities (m/s), in corresponding MAP value order
34. **wind\_dir\_map**: field-wise MAP estimation wind direction ambiguities (deg), in corresponding MAP value order
35. **max\_aposteriori\_prob\_est**: MAP value from MAP wind retrieval (units arbitrary)
36. **num\_ambigs\_map**: number of MAP ambiguities at each wvc (max=4)

## 1.2 Usage Guidance:

### Wind direction convention

The oceanographic, or flow vector, convention for wind direction is adopted for SeaWinds on QuikSCAT. Under this convention, a wind direction of 0 implies a flow toward the north.

### Reference Height for Surface Winds

The adopted reference height for all wind vectors is 10 meters.
